

Greetings,

Engineers Without Borders at UAH is a non-profit student chapter that connects students with local and international communities. The goal of our chapter is to provide communities around the world with basic human needs through engineering projects.

For our local project, we are working with an organization called Servants in Faith in Technology located in Lineville, Alabama. This organization has an onsite training facility for individuals or groups who are going on mission trips. They have requested that we design and build a non-electric ram pump to irrigate their farm.

For our international project, we are working with a village in Machaquilla, Guatemala. This village has a farm used to provide the locals with fresh fruits and vegetables. They are currently using potable water to irrigate their farm. Our goal for this village is to design and build a water pump to use water from a nearby river to irrigate the farm.

Any event sponsorship would be gladly appreciated towards our organization. UAH-EWB is a 501c3 organization, all donations will be recorded for liability. If you are unable to attend the event, please visit our website at uahewb.com.

We hope to see you at the Benefit Night. We will be serving Hors D'oeuvres and have a cash bar. The President of Teledyne Brown Engineering, Jan Hess, will be speaking about the importance of supporting college clubs that engage community through service type projects. The public is invited to attend.

Please RSVP at ewb@uah.edu by Tuesday, February 20, 2018.

Sincerely,

Engineers Without Borders at UAH
